

What's New for Version 7

TeleType is pleased to announce the following enhancements for this newest release of WorldNav Truck GPS software.

Routing

Routing with VIA point, allowing unlimited number of stops to be included in the route.

Long range routing is optimized for shortest routing producing routes that are more economical.

User Interface

Points of Interest now called Services.

New icons for Services.

New Nav Panel options include rotating information display, and the addition of a new setting, "Big Transparent Panel".

Darker Nav Panel in night mode makes seeing the nav panel makes the display easier on your eyes for night driving.

Navigation panel changes color based on conditions of travel (green=regular, gray=no signal such as being in a tunnel, red=restricted – get out immediately).

More natural address input: House number is entered before the street name.

Searchable MyPoints option, allows search for user created points by name.

Show Services (points of interest) along the route. Displays desired points such as truck stops from current position forward along the route. The corridor along the route is approximately 2-3 miles from the road. Works only when there is a route and position is fixed.

Easy transfer of your preferences from your existing program to a new version.

Application Exit button on the last WorldNav menu provides easy access to other applications.

Faster map refresh.

Pronunciation of street name is slower, providing more time for the driver to understand the instruction.

Continuous zoom by holding plus or minus on a zoom button

Easy access to program version number as it now appears under "Info".

Snap to road for MyPoints, allowing routes to be created through user defined points.

The text can be placed on an sd card and read by built-in E-book reader.

Product overview and Tutorial movies provided on the SD card, help prospective and current customers to use and understand the navigation system.

Identified and removed periodic map adjustment resulting in yellow color background appearing occasionally.

Search for Truck Stops by selecting truck stop brand name resulting in faster and easier access to desired truck stops.

Zoom out function has been enhanced to provide a more detailed map view and to more easily see the entire route.

New color coding

Gray - lost signal (such as tunnel)

Red - restricted area (get out!)

Green - navigation

Data

New U.S. maps provide updated road and restriction information.

Greater number of Points of Interest, including increased number of truck stops, and CAT scale locations.

State borderlines are now displayed on the mapping screen providing drivers the ability to more easily document crossing state lines.

Increased the number of Rest Stop listings, and the stops are now available as a separate category.
